Explanation of the TAP Teaching Standards

This section will review the important elements of the first three domains of the Teaching Skills, Knowledge, and Responsibilities Performance Standards. The details of the fourth domain, Responsibilities, will be left to each school or district to develop based on the expectations for the teachers at each individual site or district. The following pages provide an explanation of all the indicators for Instruction, Designing and Planning Instruction, and The Learning Environment. Each indicator’s descriptors will be explained with examples of how these descriptors might be implemented in a classroom. Additionally, this section provides suggested coaching questions for evaluators to utilize when conferencing with teachers, as well as suggested applications for professional development learning.

Instruction

This section includes resources and information on the 12 indicators under Instruction:

1. Standards and Objectives
2. Motivating Students
3. Presenting Instructional Content
4. Lesson Structure and Pacing
5. Activities and Materials
6. Questioning
7. Academic Feedback
8. Grouping Students
9. Teacher Content Knowledge
10. Teacher Knowledge of Students
11. Thinking
12. Problem Solving

Standards and Objectives

Planning effective lessons aligned to the standards is dependent upon the teacher’s ability to create and communicate clearly defined learning outcomes or objectives appropriate for the students. In many ways this indicator is the foundation for all other indicators because if the teacher is not clear about what he or she wants students to know and be able to do as a result of the lesson, the balance of the lesson cannot be properly developed or implemented. Both the students and the teacher should understand what is to be accomplished during each lesson.

Exemplary Descriptors for Standards and Objectives

1. All learning objectives and state content standards are explicitly communicated.
2. Sub-objectives are aligned and logically sequenced to the lesson’s major objective.
3. **Learning objectives are:**
   ≈ Consistently connected to what students have previously learned; ≈ Know from life experiences; and ≈ Integrated with other disciplines.
4. **Expectations for student performance are clear, demanding, and high.**
5. **State standards are displayed and referenced throughout the lesson.**
6. **There is evidence that most students demonstrate mastery of the objective.**

**Descriptor 1: All learning objectives and state content standards are explicitly communicated.**

The first descriptor under *Standards and Objectives* deals with the ability to “explicitly communicate” the objective or learning outcome, whether it is a state standard or sub-objective of a standard. Before a learning objective can be clearly communicated, it must be clearly written. There are three components of a clearly written objective:

1. Observable verbs/actions
2. Clear description of learning outcome
3. Measurable standards

Bloom’s Taxonomy can assist in writing objectives. Observable verbs are arranged in order of complexity in thinking. However, “explicitly communicated objectives” go beyond merely stating a clearly written objective or standard. Communicated implies that the teacher can be certain that the students know and understand the learning objective. This requires the teacher to continually make references to the objective/standard throughout the lesson and to make connections for what the teacher and students are doing as it relates to the lesson’s objective. This also provides purpose for what takes place during a lesson. The teacher and students may also refer to the stated objective/standard again at the end of the lesson for a reflection on how the students met the learning objective.

**Descriptor 2: Sub-objectives are aligned and logically sequenced to the lesson’s major objective.**

Once the objective is clearly defined, the next step is to develop the necessary sub-objectives. The selection of appropriate sub-objectives depends on the needs of the students, the complexity of the objective, and the content. There are three basic reasons for including sub-objectives:

1. To review **prior learning**
2. To teach a **new sub-skill**
3. To teach a **process** that supports the main objective

**Example 1:**

Teacher: “Today we will be creating a graph that illustrates how classmates responded to a questionnaire about sports using the pie, bar, or line format. I have put together a rubric to assist you in completing this assignment.”

When looking at the objective above, several sub-objectives could be identified. In reality, the needs of the students would determine what sub-objectives to include. For this example, there are a few sub-objectives that would probably be included in this lesson so that all students could be successful:

- To understand how to apply the pie, bar, and line graph (prior learning)
- To be able to calculate results of surveys into percentages (prior learning)
- To be able to apply the rubric to the project (process)
Example 2:

Teacher: “Today we are going to write a paragraph about a character in the story we just read. First you will complete this graphic organizer. It will provide guidance in describing your character effectively. Next you can write the paragraph. Use this paragraph checklist when you do your final edit.”

This objective is very complex. It requires the student’s ability to do many things other than the main objective of writing a paragraph. To what degree the sub-objectives must be taught may vary. As one might expect, there are times when what appeared to be a sub-objective becomes the lesson’s objective based on the students’ needs. Here are a few of the identifiable sub-objectives for this objective:

- To apply a paragraph format (prior learning)
- To be able to apply the pre-writing graphic organizer (sub-skill)
- To be able to identify characteristics of characters from a text (sub-skill)
- To be able to access each item on the checklist (process)

Descriptor 3: Learning objectives are:

- Consistently connected to what students have previously learned; Know from life experiences; and
- Integrated with other disciplines.

This descriptor is about making connections in learning. It is important for teachers to connect new learning to prior learning so students are able to see learning as a continuum and to make real-life connections about how this learning impacts their lives. This connection can be done in a variety of ways. This descriptor is closely related to the descriptors under Motivating Students and Teacher Knowledge of Students, which refer to relevancy of students’ lives and the incorporation of their interests and cultural heritage.

Example 3:

A teacher may model his/her thought process as he/she makes a connection to a specific topic and then lead students to do this through questioning. It may also be accomplished through group projects based on real-life scenarios. For example, students learning measurement may calculate the amount of carpet or paint needed to redecorate their room. Students learning about the Great Depression may research how policies from Roosevelt’s New Deal continue to affect them today.

It is also important for teachers to lead students to make connections for how what they learn in one content area connects to another content area. For example, when measuring or creating graphs in science, a teacher may make connections to math with an emphasis on math vocabulary students are learning. In literature classes, connections may be made between what is being read and a historical time period students may be studying in social studies. It is important to make such connections significant and meaningful to students.
Descriptor 4: Expectations for student performance are clear, demanding, and high.
This descriptor deals with creating learning objectives and expectations that are demanding and of high quality for all students. Whether the teacher has succeeded in doing so can only be determined by the students' response to the lesson. It is important to look at assessment and other diagnostic methods for determining what to teach. For an objective to be demanding and high for all students, a teacher may need to develop different activities and/or assessments for different levels of students within the class. It is important that all students are challenged by the learning objective.

This descriptor refers to not only clear expectations for what students are to do to support their learning, but also clear expectations for procedures and student behavior during the lesson. For expectations to be clear, students should be provided a model for what they are to do. This may include the use of visuals, teacher or student modeling, anchor papers, and rubrics to demonstrate how student work will be assessed, written steps the students are to follow when completing the assignment, etc. If students are working in groups, expectations for each group member, as well as the expectation for the group as a whole, should be clearly explained. Students need to clearly understand how they will be held accountable for individual work and group work. Procedures for obtaining materials for the group work, the expected noise level, where students may work, etc. should all be clearly explained. This descriptor connects to the Presenting Instructional Content descriptor, “modeling by the teacher to demonstrate his/her performance expectations,” and the Grouping Students descriptor, “all students in groups know their roles, responsibilities, and group work expectations.”

Descriptor 5: State standards are displayed and referenced throughout the lesson.
This descriptor deals with the importance of providing a visual display of the state standard or learning objective that can be referenced by the teacher and students throughout the lesson.

Posting the Standard or Objective
Posting the state standards in the classroom provides a visual purpose for why students are learning what they are learning. However, it is not beneficial to post a standard that all students cannot see, is not referenced, or is not understood. Therefore, it is important for the teacher to reference the standard in language that students understand throughout the lesson to provide direction and focus. Many state standards are also the language of the state test. Therefore, it is important to post the standard as an opportunity to teach students vocabulary they will need to know to be successful. In some cases, teachers use pictures or symbols to expand meaning for them. This is especially true for lower-grade students, visual learners, and students not familiar with the English language. To derive full meaning from posting the standards, the following suggestions are made:

»≈ Post the standards in large enough print so that all students can read them from their seats. By doing this, the teacher can reference them any time and know that the students are able to see and read them. Posting standards that only can be read by the teacher does not provide a learning tool for the students.

»≈ Post the standards using some visual formatting such as webbing, mapping, or any other meaningful graphic organizer. This supports students in making connections among the standards and other content areas. For example, a teacher may create a web for standards connected to what the students will be learning about World War II. The center of the web would reference World War II. The spokes or lines extending from the center would reference the sub-standards or objectives that will be part of the unit, such as significant individuals they will be studying, important battles, etc.
Post anchor papers or examples of exemplary student work along with scoring rubrics to demonstrate how students will be assessed for meeting the standard(s). These exemplary pieces may be from former students or teacher-created examples.

Post standards for a specific unit together in the classroom. By doing this, the teacher and/or students can follow the progression of sub-objectives for a particular unit and date the standards as they are learned. This method of posting standards can provide students with a clear direction for a new unit of study.

Provide students copies of standards to keep in their notebooks so they can record when each are taught and mastered.

**Referencing the Standards**

State standards are usually broad in scope. Before mastery of the standard can be accomplished, it is often necessary that students master many subordinate sub-objectives first. A metaphor provides an understanding of how the standards relate to teaching on a daily basis. For example, a state standard can be compared to the main idea of a story, while the daily lessons represent the supporting details. Therefore, by referencing the state standards, the student has an opportunity to relate the lesson to the “big picture” and to prior learning.

**Involving the Students**

There are many ways in which students can be involved with the referencing process for the standards. The following suggestions have been effective in classrooms:

A student is assigned the job of recording standards. After the lesson objective is identified, the student records a date on the section of the standard that is being addressed in the lesson. This method provides additional purpose for displaying the standard in a manner that the teacher and students can continually reference.

Students may have the standards at their desks where they individually record the date beside the standard(s) represented in the lesson for the day and reflect on how they met the standard at the conclusion of the lesson.

Students record at the top of the assigned paper which standard(s) is being addressed during the lesson.

Students may also engage in a think/pair/share activity where students reflect on and verbalize the meaning of the standard and how they met it during the lesson. This activity also connects to the *Activities and Materials* descriptors, “provide time for reflection” and “provide opportunities for student-to-student interaction.” By allowing students to pair/share, a teacher implements the descriptor under *Grouping Students*, “the instructional grouping of students also becomes varied.”

Some teachers record the standard(s) being addressed on each student assignment. This helps when recording scores in the grade book as well. The more a teacher can document when and how the standards have been taught, the more precisely a teacher can provide evidence for students’ mastery of a standard. Parents, board members, principals, and other constituents are becoming increasingly insistent that there be evidence that the standards have been effectively taught and mastered.

Many schools are posting student work and identifying the standards that are represented in the displays throughout the school. By displaying student work related to the state standards, parents and other visitors understand and appreciate what students are expected to learn. Showing work in this way also develops a better understanding of how a complex set of state standards progresses.
Descriptor 6: There is evidence that most students demonstrate mastery of the objective.
This descriptor is the most important one of all. No matter what teachers do or do not do, if students do not learn the information, then it is a waste of time and effort. Teachers must focus on what students have learned as opposed to what they have taught. Effective teachers plan formative assessments (verbal and/or written) that enable them to check for student mastery of the material taught and make modifications to their future lesson plans to meet the needs still evident in the student work.

Suggested Coaching Questions on Standards and Objectives

- How do you decide on the standards/objectives you will teach?
- How do you identify the sub-objectives for a lesson?
- How do you decide on the method you will use to communicate the standards/objectives to students?
- How do you utilize a visual of the standards/objectives during a lesson?
- How do you communicate your expectations to the students?
- How will you obtain evidence that most students have demonstrated mastery of the objective?

Professional Development Learning

- Descriptor 1 of Standards and Objectives: When modeling a strategy in a professional development meeting, the leader of professional development can use the opportunity to model effective standards and objectives to teachers as if they were students. During the model, the leader would connect how the strategy addresses state standards and present an objective as he/she would in a classroom. This would increase the sense of purpose of the professional development meeting learning, and when developing the strategy teachers would be more likely to also emulate this best practice when they transfer the strategy into their classrooms.

- Descriptors 1, 2, and 5 of Standards and Objectives: When a leader communicates the expected outcome for the professional development meeting, he/she is modeling the first descriptor from this indicator. To deepen teachers’ understanding and sense of purpose, a leader may ask teachers how their understanding of the outcome supports their new learning. This type of question can assist teachers in making connections for how student learning is supported by their understanding of standards/objectives that are clearly communicated. Many leaders post the school goal and professional development goals in the meeting room as a visual to use in modeling the importance of displaying standards in a classroom. By displaying these and referencing them each meeting, the leader models how teachers need to make connections for the objective of a lesson to the standard to which it is aligned.

- Descriptors 2 and 3 of Standards and Objectives: When a leader reviews what the teachers have been working on in professional development, he/she models how to connect current learning objectives to previous learning.
Professional Development Learning continued

- Descriptor 6 of *Standards and Objectives*: A leader must have evidence that teachers have demonstrated mastery of the new learning for there to be an immediate application of the learning into the classroom. By providing sufficient development time and clear expectations for what teachers are to develop, a leader models how this evidence can be obtained from teachers. During development time, a leader should be circulating among the teachers and questioning them to gather evidence that teachers have met mastery. By identifying for teachers what he/she is doing, a leader is able to model these descriptors for the teachers and lead them in making connections for methods they can use in obtaining this evidence from their students.

**Motivating Students**

This indicator focuses on a teacher’s ability to organize and present the content in a manner that motivates students to learn. For a teacher to be able to develop these types of learning experiences, a teacher must have in-depth knowledge of the students he/she teaches. Therefore, this indicator connects strongly to *Teacher Knowledge of Students*.

**Exemplary Descriptors for Motivating Students**

1. The teacher consistently organizes the content so that it is personally meaningful and relevant to students.
2. The teacher consistently develops learning experiences where inquiry, curiosity, and exploration are valued.
3. The teacher regularly reinforces and rewards effort.

For content to be personally meaningful to students there must be a clearly communicated purpose for student learning. Students need to understand why the content or skill being taught in a lesson is important for them to master and how their mastery of this will impact their own lives. Lessons that value inquiry, curiosity, and exploration provide opportunities for students to generate questions and conduct their own research or explore to locate the answers. When students have opportunities to generate their own questions about a given topic, their motivation to learn is usually increased as the learning becomes more student-directed than teacher-directed.

**Example 1:**

A teacher presents a lesson on immigration during the 1860s. She brings in current newspaper articles on immigrants and refugees moving to the United States. Students also interview individuals who have immigrated to the United States. These activities make the content studied relevant to the students’ lives and personally meaningful. Students also have the opportunity to develop their own questions to ask during the interviews, which provide experiences that value inquiry. This example also provides a real-world application of immigration.
Example 2:

A teacher presents a lesson on measurement. Students design a new school cafeteria applying the measurement skills taught. An architect speaks to the students and explains how measurement is used in his profession.

Teachers may reinforce and reward effort in a variety of ways. Students may be rewarded through verbal praise or recognition. A teacher may also use several student examples of work as a model for other students to follow. When a teacher effectively uses *Academic Feedback*, he/she is also reinforcing and rewarding effort by acknowledging students’ responses with an explanation for why the response may be accurate or inaccurate. This type of feedback supports an environment in which students feel safe to take risks and respond to questions. In this way it is rewarding and reinforcing their efforts.

**Suggested Coaching Questions on Motivating Students**

- How do you organize the content of a lesson so that it is meaningful and relevant to the students?
- How do you develop learning experiences that provide opportunities for students to ask questions and explore?
- How do you reinforce and reward the efforts of all students?
- Why is it important for students to have opportunities to develop their own questions and search for the answers?
- How does student motivation impact student achievement?

**Professional Development Learning**

- When modeling new learning in professional development meetings, a leader of professional development should include how he/she made the strategy meaningful and relevant to students while vetting the strategy.
- Leaders need to reinforce and reward the efforts of teachers as they participate in the new learning and develop the new learning for implementation in their classrooms. By doing this, they are modeling for teachers the types of comments they should be using in their own classrooms.
- By bringing in their own student work, analyzing it, and identifying continued student needs, teachers are able to see the connection between professional development learning and their own students. Additionally, when a leader can use data from vetting of a strategy to show that the strategy being learned in professional development will directly address the needs of the teachers’ students, and student work is integrated into the development of the new learning, it serves to further motivate teachers to participate.
Presenting Instructional Content

This indicator deals with the method in which content is taught within a lesson. The use of visuals and a teacher’s ability to clearly communicate performance expectations in a concise and logically sequenced manner are addressed by this indicator’s descriptors. The use of visuals with examples, illustrations, analogies, and/or labels are important tools to use when introducing new concepts and can lead students to mastery of specific skills in a more efficient manner. However, it may be that all of these are not included in one lesson. It is important that they are used effectively and appropriately for the content and students taught.

Exemplary Descriptors for Presenting Instructional Content

Presentation of content always includes:

1. Visuals that establish the purpose of the lesson, preview the organization of the lesson, and include internal summaries of the lesson;
2. Examples, illustrations, analogies, and labels for new concepts and ideas;
3. Modeling by the teacher to demonstrate his or her performance expectations;
4. Concise communication;
5. Logical sequencing and segmenting;
6. All essential information; and
7. No irrelevant, confusing, or nonessential information.

Descriptor 1: Visuals that establish the purpose of the lesson, preview the organization of the lesson, and include internal summaries of the lesson

The first item under this indicator refers to the effective use of visual materials to assist the learner in making connections with prior learning and in clarifying newly acquired concepts. Visuals that preview the lesson also provide students with a direction for where they are headed and what they will be doing. They support students in identifying and understanding the progression of the lesson. Based on these indicators, there are two main applications for graphic organizers or visuals:

1. Visuals that assist in the learning process
2. Visuals that organize information for the learner

It is important to note that internal summaries (mini reviews within a lesson of what has been taught) may be provided visually or orally by the teacher and students. When a teacher continually reviews sub-objectives in order to connect to the next sub-objective, students are led to ultimately move towards mastery of the lesson objective. Internal summaries provide students opportunities to have concepts restated and to reflect within a lesson on what they are learning as opposed to waiting for a review of all concepts at the end of the lesson. Teachers can lead students in providing these summaries through his/her questions and group discussions.
Descriptor 2: Examples, illustrations, analogies, and labels for new concepts and ideas

Words, mental pictures, and other clarifying techniques simplify and organize new information for the learner. Application of the methods listed in this descriptor enhances learning in the following ways:

1. **Examples:** When presenting a new concept, carefully selected examples help students to understand information. For example, during a lesson about metaphors, the teacher provided visual examples of metaphors from her own writing. She also modeled her thinking process as she created the metaphors. This type of example not only provided opportunities for students to view metaphors, but also to gain an understanding for how they were created within the teacher’s writing.

2. **Illustrations:** Providing an illustration of what is being studied helps all learners, especially visual learners. For example, before dissecting a frog, students studied an illustration depicting the internal organs. The illustration also demonstrated how to cut into the frog. Teachers may also use paintings or photographs to provide illustrations of new concepts or historical time periods.

3. **Analogies:** There are times when analogies clarify information for learners. For example, to clarify the distances related to the solar system, a teacher introduced nine common spheres of similar proportions as the planets. She then took students out on the playground and had students arrange them at appropriate distances from the sun, making clear connections for how what they were doing related to distances within the solar system. In this example, students actually participated in the analogy. Another example of an analogy is the comparison of appropriate graphic organizers to the choosing of appropriate tools to hammer in nails or tighten screws. The teacher explained to students that graphic organizers are “tools” to support their organization of material and different organizers support different tasks.

4. **Labels:** Labels help clarify information. For example, students were having a difficult time writing complete sentences so the teacher decided to have students label the parts of their sentences. Pictures with labels may also be used to introduce vocabulary, important people, or new concepts. This type of labeling would be strong since it combines the use of illustrations and labels. During a study of the solar system, the teacher modeled for the students how to label planets. During a study of the circulatory system, a teacher modeled how to label the parts of the heart and identify the function for each part.

Descriptor 3: Modeling by the teacher to demonstrate his or her performance expectations

The ability to model the use of new information and the teacher’s expectations for student performance is one of the most important descriptors for this indicator. An effective teacher must be able to model desired outcomes. In order to model effectively, the teacher must be able to do the following:

- Know exactly what the expected outcome is
- Identify the critical elements of the desired outcome
- Create clearly defined steps so learners can achieve the desired outcome
- Provide examples for how the completed project/assignment should look
**Example: Know Exactly What the Expected Outcome Is**

A teacher explained to the students that the learning objective was for them to be able to identify physical characteristics of two characters from a novel and compare and contrast them. She told the students they would be expected to create an illustration of two characters from a novel the class was reading and then complete a Venn Diagram to compare their characteristics. She chose two different characters to model her expectations and the thought process she went through in deciding how to draw the characters. She explained various ways the students could approach the project and provided clear criteria through the use of a rubric for how the finished project would be evaluated. She led the students to apply the rubric to her work as an additional way to ensure they understood her expectations for their work. She then modeled how she took the characteristics of the two drawings and used a Venn Diagram to organize the similarities and differences in the drawings. Students were able to clearly understand the expected outcome for the lesson and the expectations for their work.

**Example: Identify the Critical Elements of the Desired Outcome**

As the teacher modeled her work of the steps in the example above, she identified the elements or requirements for the student work. Using the rubric for the assignments, she identified each required element of the illustration and Venn Diagram on her examples. This provided students a clear understanding of what needed to be included in each assignment and how the elements would be evaluated.

**Example: Create Clearly Defined Steps So Learners Can Achieve the Desired Outcome**

When modeling the expectations for the assignment in the example above, the teacher clearly explained the order in which the students would need to complete the steps required for the assignment. First, they would need to select two important characters with criteria for how to select them. Then students would need to identify specific characteristics of these characters that would be incorporated into their illustrations. The explanation would continue through each step. To support visual learners, the teacher may display a written list of the steps on the board or chart paper.

**Descriptors 4-7: Concise communication; logical sequencing and segmenting; all essential information; and no irrelevant, confusing, or nonessential information**

These descriptors relate to a teacher’s knowledge of the content he/she is teaching and his/her ability to clearly explain the content to students in a logical manner. For this to occur, a teacher must first clearly define the learning objective for the lesson and then maintain the focus of the lesson on this objective, which may require teachers to redirect students’ comments. The sequencing of the lesson relates to the sub-objectives that are taught within
a lesson. Sub-objectives should be taught or reviewed in an appropriate sequence for the grade level and ability of the students. The segmenting of the lesson relates to the pacing of the lesson. An effective teacher will provide sufficient time for the introduction of the lesson, the instruction within the lesson, the student activities, and closure. Although these may be embedded within each other during a given lesson, the segmenting of the lesson allows sufficient time for each to take place so that students can have opportunities to master the learning objective. Therefore, these descriptors are closely connected to the descriptor, "teacher displays accurate content knowledge of all the subjects he or she teaches," under Teacher Content Knowledge, and the descriptor, "pacing is appropriate, and sometimes provides opportunities for students who progress at different learning rates," under Lesson Structure and Pacing.

### Suggested Coaching Questions on Presenting Instructional Content

- How do you decide on the types of visuals you will use during a lesson?
- Why is it important for the teacher to model his/her expectations for students?
- How do you plan for effective modeling during a lesson?
- How do students clearly know your expectations for their assignments and for what they are to learn?
- When planning a lesson, how do you decide on the sequencing of the instruction within the lesson?
- When planning a lesson, how do you decide on the manner in which the different elements of the lesson will be segmented?
- How do you maintain focus in a lesson on the learning objective?

### Professional Development Learning

- When leaders of professional development provide a visual for what teachers will be doing during the meeting, they are modeling the use of visuals that establish the purpose of the lesson and preview the organization of the lesson. By making reference to the visual, a leader models for teachers how these visuals can be utilized.

- When leaders model the new learning for teachers with a clear explanation of the strategy, or chunk of the strategy, along with the critical attributes, they are modeling the third descriptor. A leader needs to ask him/herself how will teachers know exactly what they need to do in the classroom to ensure their teaching of the strategy results in increased student achievement. For this to occur, teachers need a model. In this same way, students must have a model of a teacher’s explanations. Therefore, a leader needs to clearly model for the teachers how they should model in their own classrooms. This may include specific visuals that need to be used, examples of analogies to support student understanding, and appropriate sequencing of the instruction. Through effective modeling of these elements, a leader provides clarity for how teachers need to present the strategy (content) in their classrooms so the result is increased student achievement.
Descriptors 4 through 7 play a role in how a strategy is "chunked" to ensure that the new learning for teachers is manageable and able to be mastered by the end of the professional development meeting. Of course, the ultimate driver of professional development learning is student data, but leaders also need to take into consideration the amount of new learning teachers can learn, develop, and implement proficiently before the next meeting.

Lesson Structure and Pacing

This indicator blends time and form as it applies to instruction. It addresses the effective segmenting of the lesson so that sufficient time is allocated to all parts of the lesson to best support student learning. Therefore, this indicator connects closely to the descriptor, "logical sequencing and segmenting," under Presenting Instructional Content.

Exemplary Descriptors for Lesson Structure and Pacing

1. All lessons start promptly.
2. The lesson’s structure is coherent, with a beginning, middle, end, and time for reflection.
3. Pacing is brisk and provides many opportunities for individual students who progress at different learning rates.
4. Routines for distributing materials are seamless.
5. No instructional time is lost during transitions.

Descriptors Focused on Time/Pacing

The rubric indicator focuses on the following issues associated with instructional time:

1. Prompt start
2. Different learning rates
3. Seamless routines
4. Smooth transition

Starting promptly, building smooth transitions, and developing seamless routines can be done with practice and careful planning. The greatest challenge presented in this indicator is the ability to provide enough time so that all students of varying rates of learning can complete each learning task. Therefore, it is important that a teacher has knowledge of the various learning needs of his/her students.

When reviewing evidence from a lesson for these descriptors, the third descriptor, "pacing is brisk," refers to the efficient use of instructional time during the lesson, not the speed of the lesson. Was appropriate time devoted to each element of the lesson? Did the lesson continue to flow or was there time wasted in which students were not focused or engaged in the learning? If the pacing is brisk, all students remain focused and engaged in learning throughout the lesson. Students do not experience "down time" while waiting on other students to complete assignments or on instruction that they have already mastered. Therefore, this descriptor connects to a teacher’s use of student feedback to monitor and adjust instruction under Academic Feedback to ensure that the pacing of the lesson is brisk and meets the needs of all students.
Example:

A teacher begins a lesson on the causes of the Revolutionary War with an explanation of the learning objective and a preview of the lesson (clear beginning). He then provides direct instruction by modeling how to complete a graphic organizer on the causes and effects of the war. Students are led to finish the organizer on their own as they read the text or other source of information. Students who are below grade level in reading continue to receive direct instruction from the teacher and assistance in completing the graphic organizer. Students who are on grade level or above complete the assignment independently and are provided additional activities to enhance their understanding of the causes (pacing provides opportunities for students who progress at different learning rates). Before students are dismissed, the teacher brings the class together again and reviews the objective and has students identify the causes and effects they included on their graphic organizers (closure). Students complete an exit ticket before leaving class in which they reflect on which cause of the war they believe had the greatest impact (time for reflection).

Suggested Coaching Questions on Lesson Structure and Pacing

- How do you decide on the manner in which you will segment the different parts of a lesson?
- How do you plan for effective closure within a lesson?
- How do you plan for the pacing of a lesson that provides opportunities for students who progress at different rates?
- How do you ensure that instructional time is used efficiently throughout a lesson so that all students remain actively engaged in learning?

Professional Development Learning

- When leaders of professional development model new learning, they need to include how they began the lesson and how they provided closure to the lesson. The manner in which these were done should be clearly labeled for teachers.

- In addition to including a clear beginning and closure in the modeling, leaders should include a clear beginning and closure to the professional development meeting, which can be done by reviewing the school and professional development goals to set the purpose for the new learning and by providing a review of the new learning at the end of the meeting. When leaders do this, they need to make the connection for teachers that they are modeling how a lesson should begin and end.

- Leaders also model lesson structure and pacing by appropriately pacing for the different parts of a professional development meeting.
Activities and Materials

This indicator addresses the variety and appropriateness of activities and materials that a teacher chooses to implement during a lesson. By using a variety of materials and activities, teachers are able to address various learning styles and intelligences. Therefore, the criteria used by teachers in choosing materials and activities should be those that clearly support the lesson objectives and that are related to the needs of the students, making this indicator closely related to Teacher Knowledge of Students. In order to plan appropriate activities and materials, a teacher must have knowledge of the needs and interests of the students.

Exemplary Descriptors for Activities and Materials

Activities and materials include all of the following:

1. Support the lesson objectives;
2. Are challenging;
3. Sustain students’ attention;
4. Elicit a variety of thinking;
5. Provide time for reflection;
6. Are relevant to students’ lives;
7. Provide opportunities for student-to-student interaction;
8. Induce student curiosity and suspense;
9. Provide students with choices;
10. Incorporate multimedia and technology; and
11. Incorporate resources beyond the school curriculum texts.
12. In addition, sometimes activities are game-like, involve simulations, require creating products, and demand self-direction and self-monitoring.

The descriptors for Activities and Materials can be classified into three main categories:

1. Content-Related Descriptors
   1. Support the lesson objectives
   2. Are challenging
   3. Elicit a variety of thinking
   4. Provide time for reflection
   5. Are relevant to students’ lives

2. Student-Centered Descriptors
   1. Sustain students’ attention
   2. Provide opportunities for student-to-student interaction
   3. Induce student curiosity and suspense
   4. Provide students with choices
3. Materials Descriptors

1. Incorporate multimedia and technology
2. Incorporate resources beyond the school curriculum texts
3. In addition, sometimes activities are game-like, involve simulations, etc.

When applying this indicator to a lesson, it is critical that evidence for the first descriptor exists. Therefore, this descriptor connects directly to the descriptors under Standards and Objectives. A teacher may incorporate a variety of activities and materials within a lesson, but if their use is not purposeful in supporting students in meeting the learning objective, then the purpose for their use may not be clear or appropriate.

In developing activities and materials that are challenging, it is important that they are challenging for all students as opposed to just a few. Therefore, this descriptor relates closely to Teacher Knowledge of Students.

The descriptor, “incorporate resources beyond the school curriculum texts,” relates to the use of materials beyond a textbook. A teacher may use manipulatives that are provided by the curriculum tool kits. These would still be considered resources beyond the school curriculum text. This may also include the use of photographs, novels, picture books, personal artifacts, etc.

The last descriptor under the exemplary category includes the word sometimes. Therefore, the expectation would not be for all of these to be included all of the time.

Questions to Ask When Increasing Student Participation

When beginning to develop these skills, teachers may ask the questions below as they observe a lesson or after they teach a lesson themselves:

1. Students’ attention: How will I maintain all students’ attention during the lesson? (list)
2. Student-to-student interaction: How will I allow for meaningful student-to-student interaction? (list)
3. Student curiosity: How will I deliberately set the conditions for students to demonstrate curiosity?
4. Choices: How will I provide students with significant choices related to the content?
5. Creating: How will children create and self-monitor their own learning?

After answering these questions, teachers should always ask what impact each of these will have on student achievement and what will be the evidence for this.

Example 1: Designing a Variety of Activities

A teacher assessed students and realized that they were experiencing difficulty in making inferences. Not only was this a critical reading comprehension skill, but also a skill tested on the standardized test. Her objective was: “By the end of this lesson you will be able to identify details in text and use your own experiences to develop an appropriate inference.” Next, she looked at the descriptors related to content when she began to design her lesson. She designed her lesson with several activities:
Example 1: Designing a Variety of Activities continued

Students were to work in pairs to identify details from the text that connected to the inference question asked.

Each student would think of an experience or prior knowledge they had that connected to the text and then pair/share this with a partner.

Each student would complete a graphic organizer with this information.

Each student would write the inference and include a reflection on how the process had been supportive in making an appropriate inference.

After the activities were designed, the teacher used select descriptors to be certain that students were involved in the referenced activities:

1. Support: The activities supported the objective for students to make an inference.
2. Thinking: She determined that when students are asked to infer, they are thinking at a higher level. A question she was sure to ask was: “How did you develop your inference? Why was it appropriate?”
3. Reflection: There was time for reflection in the lesson when the students were told to reflect on how the process had supported them.
4. Relevant: By using their own experiences and/or background knowledge, the lesson became relevant to the students since they had opportunities to make connections to the text.
5. Interaction: Students also had opportunities for student-to-student interaction when they paired/shared.
6. Curiosity: Student curiosity and suspense would be provided as students would continue reading text or conducting research to learn if their inference was correct.
7. Choices: Students were provided choices for the connections they would make to the text and the supporting details they would identify that connected to the inference question.

Example 2: Providing Students with Choices

One teacher reflected upon each lesson after school by using the questions on the previous page. She noted that she could not consistently think of many instances when students made significant choices. The following week she added two opportunities for students to make significant content-related choices: 1) Students could develop a summary using any media; and 2) Students were able to choose whether to write prose or poetry for an assignment. During her reflection, she admitted that she saw some enthusiasm expressed by several of her students who were otherwise passive. In analyzing the student work, she found that several students who normally performed on a lower level were able to show mastery of the skill when provided choices for how they would meet the objective. She then began developing other ways to provide students with choices in future lessons. She found students were able to provide evidence of mastery in a way that supported their own strengths or intelligence.
Suggested Coaching Questions on Activities and Materials

- How do you decide on the types of materials you will use during a lesson?
- How do you decide on the types of activities you will use during a lesson?
- How do you develop activities that are aligned to the learning objective?

Professional Development Learning

- Professional development time should be spent on modeling the use of materials and activities that support student success as they relate to the new learning in professional development. An expectation of an effective professional development leader is that he/she would come to meetings prepared with appropriate materials and activities that have been applied to teachers’ students. By vetting strategies prior to teaching them to teachers in professional development, leaders should have identified and developed the materials that are required to make the strategy successful for the students represented by teachers. In developing these, a leader should refer to the descriptors under Activities and Materials, as well as the needs of the students.

- When teachers participate in professional development activities and/or are given materials to read, they should all be aligned with the professional development outcome of increasing teacher instructional proficiency to address a specific student need. The same premise is true during the development portion of professional development, where the focus of the activities should be on preparing teachers to effectively teach the strategy in the classroom while utilizing all the critical attributes highlighted during the model.

Questioning

Questioning is an art form that reveals a great deal about a teacher’s effectiveness. The rubric descriptors provide a basic framework for the types of questions to ask within a lesson and how teachers should lead students in responding to questions.

Exemplary Descriptors for Questioning

1. Teacher questions are varied and high quality, providing a balanced mix of question types: ≈ Knowledge and comprehension;
   ≈ Application and analysis; and
   ≈ Creation and evaluation.
2. Questions are consistently purposeful and coherent.
3. A high frequency of questions is asked.
4. Questions are consistently sequenced with attention to the instructional goals.
5. Questions regularly require active responses.
6. Wait time is consistently provided.
7. The teacher calls on volunteers and nonvolunteers, and a balance of students based on ability and gender.
8. Students generate questions that lead to further inquiry and self-directed learning.

The descriptors for Questioning can be classified into two main categories:

1. **Procedural Questioning Descriptors**
Several of the descriptors are focused on simple procedural operations that are easy to develop. These descriptors are:

1. A high frequency of questions is asked.
2. Wait time is consistently provided.
3. The teacher calls on volunteers and nonvolunteers, and a balance of students based on ability and gender.

**Examples:**

It may benefit teachers trying to include these descriptors in a lesson to write students’ names on Popsicle sticks or strips of paper and pull a name to respond to the questions asked. Teachers may also assign numbers to students and use a deck of playing cards to call on students by their numbers. Students may also choose classmates to call upon. These types of methods help a teacher avoid repeatedly calling on the same students or calling only on volunteers who may have their hands raised. Teachers may also have students respond to a partner before answering a question aloud for the whole class. This method can provide a way to hold each student accountable for formulating a response and sharing their answer with someone else. When providing wait time for students, it is important for the teacher to label this for students so that he/she may use the opportunity to teach students how to provide wait time for one another.

2. **Content-Related Descriptors**
Four descriptors listed for questioning are related to the intricate use of a variety of questions to support student learning. These indicators are:

1. Teacher questions are varied and high quality, providing a balanced mix of question types: » Knowledge and comprehension;
   » Application and analysis; and
   » Creation and evaluation.
2. Questions are consistently purposeful and coherent.
3. Questions are consistently sequenced with attention to the instructional goals.
4. Students generate questions that lead to further inquiry and self-directed learning.

When a teacher effectively utilizes questions that are purposeful and coherent, then students’ responses may be utilized as a formative assessment in determining which students have mastered the learning objective (**Standards and Objectives**).

For support in generating questions, refer to Bloom’s Taxonomy. It is important to note how the use of higher-order questions will impact the evidence for the descriptors under **Thinking**.
The effective teacher does not limit the use of questions in a lesson to only teacher-generated questions, but guides students in generating questions that support their own learning. In leading students to generate their own questions, it is also important for them to have knowledge of the different question types. These can be modeled for them through the teacher’s questions and through a purposeful teaching of Bloom’s Taxonomy.

Example:

When a teacher introduces a lesson, students may be led to complete a “KWL chart.” By doing this, each student has the opportunity to generate questions that he/she wants answered as the content is being presented. Students may also generate questions about a topic they are researching. For example, students may be writing biographies on significant figures of the Civil Rights Movement. The teacher provides specific information that must be included in the biography and also allows students to generate questions they would like to learn about the individual. Both sets of questions would guide the student’s research. By providing opportunities for students to generate questions, teachers also develop learning experiences where inquiry is valued (Motivating Students) and provide students with choices (Activities and Materials).

Suggested Coaching Questions on Questioning

- How do you decide on the types and frequency of questions you ask during a lesson?
- Why is it important for teachers to ask higher-order questions during a lesson?
- How do you provide opportunities for all students to respond to your questions?
- How do you provide for wait time during a lesson?
- What is the purpose for a teacher to provide wait time?

Professional Development Learning

- It is important for leaders of professional development to continually question teachers on a higher level as a means of modeling the use of higher-level questions. While doing this, it is also effective to have teachers identify the level on Bloom’s Taxonomy to which the questions align. By doing this, leaders can assess teachers’ understanding of Bloom’s Taxonomy.

- When asking questions in professional development, leaders also need to model the use of wait time. A leader may tell teachers that he/she just wants them to think about their response for a few seconds before responding. Then ask the teachers how the use of the “think time” or wait time supported them in formulating a response.

- Teachers may also pair/share their responses as a model for what they can do with their students in the classroom. This method also supports teachers in developing a variety of ways to require active responses.

- Just as teachers use questioning to assess student understanding, leaders should ask teachers questions to build connections between the new learning being modeled and the teachers’ own students and personal instruction needs. The leader should also use questions to informally assess teachers’ understanding of the new learning and use that information to inform the type of follow-up support being provided.
Explanations of the TAP Teaching Standards

Academic Feedback

This indicator focuses on how teachers respond to students’ comments and questions. The descriptors address the quality of the feedback in supporting student learning as opposed to feedback that only informs students of the accurateness of their responses. Additionally, these descriptors address how a teacher uses student feedback to make adjustments in instruction.

Exemplary Descriptors for Academic Feedback

1. Oral and written feedback is consistently academically focused, frequent, and high quality.
2. Feedback is frequently given during guided practice and homework review.
3. The teacher circulates to prompt student thinking, assess each student’s progress, and provide individual feedback.
4. Feedback from students is regularly used to monitor and adjust instruction.
5. Teacher engages students in giving specific and high-quality feedback to one another.

Feedback Descriptors Focused on Quality

The checklist below provides information that helps teachers develop the ability to provide high-quality feedback. The rubric references “high-quality” feedback in two descriptors (1 and 5). Without consensus on what high-quality feedback is, the rubric cannot be scored accurately. There are many instructional leaders who feel that a classroom observer should be able to “guess” what the objective for the lesson is by simply listening to a teacher’s feedback during a lesson. Such precision must be developed using the criteria below.

Checklist for Determining Quality of Feedback:

»» Feedback relates to the lesson objective or sub-objective.
»» Feedback causes students to think.
»» Feedback is specific.
»» Feedback is timely.
»» Feedback is varied to meet the unique needs of the students and classroom.

Descriptor 1 references the use of oral and written feedback. However, evidence for this descriptor may be present if the teacher consistently provides high-quality oral feedback as opposed to procedural, superficial oral and written feedback.

Example:

The objective of a lesson was: “Boys and girls, today you will learn about one way to form a paragraph. We formulate a topic sentence and at least three supporting sentences. Then we end the paragraph with a summary statement.” She provided a graphic organizer after they collectively developed a topic sentence. While children wrote the supporting details independently, she provided feedback. The following feedback was recorded:
Example: continued

- “Marie, very nice sentences because they include strong details.”
- “Henry, your first detail is a complete sentence. That’s just great. Look at your second detail. What can we add to make a complete sentence?”
- “Louise, if you would like more inspiration, let’s look at the story for paragraph details. Good. It’s right there. I think you will find some great material for writing details.”
- “Jamie, you have three details that will make a great paragraph. What will make a good summary statement?”

It is also important for teachers to model for students how to provide each other with high-quality academic feedback.

Example:

Following the same lesson objective as provided in the above example. After the students have completed their writing, the teacher pairs them for the purpose of conferencing on each other’s writing. To ensure students know her expectations for the conferences, she pairs with a student and models the questions and type of feedback she would provide to the student. Within this model she explains that it is important for students to clearly explain why an area of the writing is strong and why another needs to be strengthened. She does this by providing high-quality feedback that is focused on the lesson objective of writing a topic sentence, supporting details, and summary statement. Along with this model, the teacher may also include written feedback on the student’s writing that is focused on the objective.

Suggested Coaching Questions on Academic Feedback

- How do you decide on the type of feedback you provide to students?
- How do you use student feedback to make adjustments in your instruction?
- How do you engage students in providing quality feedback to one another?

Professional Development Learning

- When modeling new learning in professional development, a leader may provide specific examples of students’ comments from his/her vetting of the strategy and the feedback he/she provided in response to these comments. Along with these examples, a leader would need to provide the thought process or purpose he/she used in deciding on the type of feedback provided to students.
Professional Development Learning continued

- Leaders also model the use of academic feedback by providing it to teachers when they ask questions or make comments. Leaders may use paraphrasing and summarizing of teachers' comments to deepen the learning for all teachers. When doing this, it is important for leaders to label this type of feedback to ensure teachers make connections for how a leader's feedback supports their own learning.

- During development time, teachers can work together to provide feedback to each other regarding each teacher's planning and/or presentation of the strategy. Leaders should be modifying their feedback to teachers based on each teacher's proficiency with the strategy and make appointments for follow-up based on these observations.

### Grouping Students

This indicator deals with the instructional arrangements of the students during a given lesson. It focuses on how the students will be grouped for the instruction and activities of the lesson and how they will be held accountable for the work they are expected to complete.

#### Exemplary Descriptors for Grouping Students

1. The instructional grouping arrangements (either whole class, small groups, pairs, or individual; heterogeneous or homogeneous ability) consistently maximize student understanding and learning efficiency.

2. All students in groups know their roles, responsibilities, and group work expectations.

3. All students participating in groups are held accountable for group work and individual work.

4. Instructional group composition is varied (e.g., race, gender, ability, and age) to best accomplish the goals of the lesson.

5. Instructional groups facilitate opportunities for students to set goals, reflect on, and evaluate their learning.

### Structuring Learning Groups

Indicators 1, 2, 3, and 4 focus on structuring learning groups. For teachers learning how to implement grouping that enhances learning, these descriptors are a good place to start when planning.

When placing children into groups, the teacher must be able to assure that every student is actively engaged. This can be done by clearly defining the roles and responsibilities.
Example: Roles and Responsibilities

During an observation, a teacher placed students into learning groups. She assigned four roles to groups of four students. Unfortunately, two of the roles were so contrived that students perceived them as purposeless. The roles of “time manager” and “encourager” had no relevant responsibilities and the teacher’s expectations for these roles were not explained or modeled. When she walked around, about half the students were not engaged in the activity. The next time this teacher tried grouping, she looked at the learning objective for the lesson and identified all of the components needed for successful mastery and developed the group roles based on these components. By focusing on the learning objective, she was able to develop meaningful roles and divide the “work load” evenly. In addition, the teacher modeled the expectations for each role and provided a visual identifying the responsibilities for each individual role. This time, when she circulated among the groups, she noted full participation.

The following example illustrates specific examples of roles that may be assigned to group members. A science teacher is having students work in groups to conduct an experiment. Each group is expected to illustrate the results of the experiment and present recorded data. There are four members in each group and the following roles are assigned: Materials Manager, Illustrator, Data Recorder, and Task Manager. Each role is clearly defined and explained by the teacher to ensure that all students understand the expectations.

Questions to Ask When Designing Accountability

»» What outcome do I expect students to accomplish by the end of each group session?
»» How will I provide quality feedback on progress? By group? By individual?
»» How will I record this information in a grade book and/or student record?
»» How will I use this information as a formative assessment?
»» Is this work expectation appropriate for small groups? Whole group? Individual?

Example: Group Work Expectations and Groups and Individuals are Held Accountable

A teacher implemented group learning using centers in her classroom. She often did this but complained about the noise. When her classroom was observed, it was evident how she could increase proficiency. Children moved from one center to another when the bell rang. There was no expectation for what the students were to accomplish at the centers. The teacher realized how important it was to have clear expectations and accountability for what students did in groups independently. By answering the following “Suggested Coaching Questions on Grouping,” she was able to construct reasonable outcomes for each center. She provided feedback on student performance and a chart was placed at each center. This chart provided ongoing feedback to students about what they needed to accomplish. The teacher was also able to provide valuable information to the parents.
There must be a rationale for why students are grouped together. There are a variety of grouping patterns, including:

- By heterogeneous or homogeneous grouping of ability
- By demographic balance
- By interest
- By ability to focus
- By ability to communicate
- By language acquisition levels

Regardless of how the grouping arrangements are developed, the grouping should *enhance* the learning for all students. The ability of a teacher to group students in this manner is directly connected to his/her knowledge of the students; their individual needs, interests, and abilities.

### Suggested Coaching Questions on Grouping

- How do you decide on the instructional grouping of students during a lesson?
- How do you hold groups and individuals accountable for work completed within a group?
- How do you decide on the roles individuals will have when working in groups?
- How do you communicate your expectations to students for their own work and that of the group?
- How do you assess the performance of groups and individuals when it is completed in a group setting?

### Professional Development Learning

- When modeling new learning in professional development, a leader can include grouping of the teachers as a means of modeling specific descriptors from this indicator. It is important for teachers to reflect on how the grouping arrangement impacted their own learning.
- When vetting a strategy, leaders need to identify how grouping of students enhances the instruction. The identified grouping arrangement then becomes a critical attribute of the strategy. The way in which the groups need to be arranged and the purpose for the grouping arrangements need to be clearly explained during the leader’s modeling of the new learning. This would also include how the leader held individual students and groups accountable during vetting of the strategy.
- Teachers may also work in pairs or groups during the development of the new learning. If teachers are selecting passages as part of the development, then one teacher may select a passage appropriate for below-grade-level readers and another teacher may select a passage for above-grade-level readers, then share both these passages for use in their classrooms.
Teacher Content Knowledge

This indicator addresses the teacher’s knowledge of the content he/she is teaching, as well as their ability to implement strategies to support student learning. Also addressed in this indicator is the teacher’s ability to connect the content being taught to other ideas and concepts.

Exemplary Descriptors for Teacher Content Knowledge

1. Teacher displays accurate content knowledge of all the subjects he or she teaches.
2. Teacher regularly implements a variety of subject-specific instructional strategies to enhance student content knowledge.
3. Teacher regularly highlights key concepts and ideas, and uses them as bases to connect other powerful ideas.
4. Limited content is taught in sufficient depth to allow for the development of understanding.

Example 1: Teacher Highlights Key Concepts and Connects to Other Powerful Ideas

A teacher is conducting a lesson on immigration in the 1860s and relates immigration from the time period to the present day. News articles about immigrants and refugees are presented during class. Students select someone they know who has immigrated to the United States to interview. Comparisons are made between immigrants of the 1860s and immigrants of today (reasons for immigrating, countries of origin, experiences, etc.). By connecting immigration of the 1860s to immigration of the present day, having students interview immigrants, and debate the impact of immigrants in their community, the teacher has highlighted key concepts and connected them to more powerful ideas.

Example 2: Teacher Highlights Key Concepts and Connects to Other Powerful Ideas

Groups of students are studying the circulatory and respiratory systems. During their study of how the two systems function and support each other, they also study diseases of the two systems. The teacher has students utilize the information they have gained to develop plans for a healthy lifestyle, which could help prevent heart attacks, lung cancer, etc. Students present their plans to other students and to the school administration. They also use the plans to develop a healthy menu for the school cafeteria.

By leading students to connect to these other ideas and concepts, a teacher provides evidence of his/her knowledge of the content being taught and ability to utilize a variety of subject-specific instructional strategies to teach the content.
Suggested Coaching Questions on Teacher Content Knowledge

☐ How do you prepare yourself to teach (insert the specific topic taught)?
☐ How do you develop or select instructional strategies to teach (insert the specific topic being taught)?
☐ How do you decide on the ways in which you will connect the content being taught to more powerful ideas?
☐ What are some other ideas to which you could have connected during the lesson?

Professional Development Learning

☐ When modeling new learning in professional development, a leader needs to explain and model how he/she led students to connect other powerful ideas during the lesson. Examples of ways this can be done need to be provided for the teachers during the modeling. Then teachers can incorporate these into their development of the new learning.
☐ Leaders always need to display their own knowledge of the content as they model. For this reason, it is beneficial when leaders are modeling a strategy targeting a reading comprehension skill to model it within a science, social studies, or math content lesson. By embedding a reading strategy within the content area, a leader is able to display content knowledge, but also model how to connect to other ideas and concepts.

Teacher Knowledge of Students

This indicator deals with how well a teacher knows his/her students and their learning styles and interests. Therefore, it is closely connected to the indicator, Motivating Students.

Exemplary Descriptors for Teacher Knowledge of Students

1. Teacher practices display an understanding of each student’s anticipated learning difficulties.
2. Teacher practices regularly incorporate student interests and cultural heritage.
3. Teacher regularly provides differentiated instructional methods and content to ensure children have the opportunity to master what is being taught.

Descriptors 1 and 3 address a teacher’s ability to meet students’ learning needs. These descriptors connect closely to the descriptor, “pacing is brisk,” and provide many opportunities for individual students who progress at different learning rates under Lesson Structure and Pacing. Descriptor 2 deals with a teacher’s ability to connect the content being taught to the interests and background of the students. Therefore, these descriptors relate closely to the descriptor, “the teacher consistently organizes the content so that is personally meaningful and relevant to students,” under Motivating Students.
Differentiated instruction may include activities to address auditory, visual, and kinesthetic learning styles or it may include providing students with choices in assignments that relate to the multiple intelligences. It may also mean that teachers provide students with extended time to complete assignments or abbreviate assignments based on student need.

**Example:**

During a lesson on the solar system, the teacher displays a poster of the planets, students act out the alignment of the planets, and the class reads an article on one of the planets. Within this lesson, visual, auditory, and kinesthetic learners’ needs are addressed.

**Suggested Coaching Questions on Teacher Knowledge of Students**

- How do you identify the learning styles of your students and incorporate these into your lessons?
- How do you identify the interests of your students and incorporate these into your lessons?
- How do you provide differentiated instructional methods within your lessons?

**Professional Development Learning**

- When a leader regularly refers to the characteristics of student work from his/her vetting of a strategy and from teachers’ presentations, he/she is able to identify and model modifications to a strategy based on the anticipated learning difficulties of students. These modifications should then be incorporated into the development of the new learning by the teachers, which provides ways for them to include descriptors 1 and 3 into their lessons.
- A leader includes in his/her modeling of the new learning how to incorporate students’ interests and cultural heritage. Specific examples are provided and modeled. A leader may also incorporate the interests and heritage of the teachers into the modeling as a way to provide teachers with what descriptor 2 looks like and sounds like in the classroom. When doing this, a leader should label, or have the teachers label, what has been modeled and the importance for relating to their interests.
Thinking

Thinking is something that can and should apply to every observation of a teacher. To assess thinking, certified NIET evaluators are not looking for each thinking behavior to occur in every lesson, but instead are looking for the occurrence of all behaviors over the course of multiple observations and evaluations during the school year. This may mean that one lesson has two types of thinking during an observation visit. On another visit, the teacher uses a different type, and so on. It is important to note that this indicator states over the course of multiple observations, not over the course of multiple evaluations. Therefore, the multiple observations would be the regular support provided by administrators and teacher leaders in the form of team teaching and observing. When the teacher is formally evaluated, the types of thinking observed in previous lessons would impact the score assigned to this indicator.

Exemplary Descriptors for Thinking
Over the course of multiple observations, the teacher consistently and thoroughly teaches all four types of thinking:

1. Analytical thinking, where students analyze, compare and contrast, and evaluate and explain information;
2. Practical thinking, where students use, apply, and implement what they learn in real-world scenarios;
3. Creative thinking, where students create, design, imagine, and suppose; and
4. Research-based thinking, where students explore and review a variety of ideas, models, and solutions to problems.

The teacher regularly provides opportunities where students:

5. Generate ideas and alternatives;
6. Analyze problems from multiple perspectives and viewpoints; and
7. Monitor their thinking to ensure that they understand what they are learning, are attending to critical information, and are aware of the learning strategies that they are using and why.

Descriptors 1 through 4 discuss the four types of thinking that teachers are expected to implement regularly and consistently. These thinking types were compiled based on twenty years of research by the most prominent psychologists in America.

Descriptor 1: Analytical thinking, where students analyze, compare and contrast, and evaluate and explain information
Most teachers focus only on analytical thinking in their classrooms. This type of thinking demands that students analyze, evaluate, and explain phenomena. Analyzing, evaluating, and explaining information is a skill that applies to all disciplines and is critical for an informed and educated society.

Example 1: Analytical Thinking

In language arts a class is reading Charlotte’s Web. Through a Venn Diagram, the class compares and contrasts Wilbur’s personality traits with those of Charlotte. Next, the teacher asks the students to analyze the text and find specific words that provide evidence of the character traits the student listed. For the final part of this assignment, the teacher asks students to explain why Charlotte chose to help Wilbur and what each child would do if he or she were Charlotte.
Example 2: Analytical Thinking

Students are studying a specific artist’s work. They are asked to observe a painting and identify one thing in the painting or element of the painting that could be removed that would not alter the artist’s intent. Students may also be asked to explain what the painting reveals about the artist’s attitude towards life, war, nature, etc.

Descriptor 2: Practical thinking, where students use, apply, and implement what they learn in real-world scenarios

Many students often do not see the connections between what they learn in school and how they can use this knowledge in the real world. Teachers who integrate practical thinking into their teaching design learning activities where students are forced to use and apply concepts and ideas that they learn. In this way, this descriptor connects to the descriptor, “the teacher consistently organizes the content so that it is personally meaningful and relevant to students,” under Motivating Students.

Example 1: Practical Thinking

A class is working on measurement. Often teachers have students measure various objects in the room. While this has students apply the concept of measurement, the utility and relevance of how measurement works in the real world is not clear. Instead, the teacher informs students that they will be building tree and plant boxes throughout the school. These planters will be various shapes and sizes and will require students to not only measure and cut different pieces of wood to build them, but also to estimate the sizes of the correct plants and bushes to put in them.

Example 2: Practical Thinking

A group of students is fed up with the cafeteria food and they have decided to do something about it. First, they research what the necessary requirements are for a healthy lunch. Next, they design a menu for two weeks. Finally, they create the shopping list and pricing list to ensure that the lunches they are requesting are affordable. After working through each of these issues, the students present their menu, shopping list, and pricing list to the school board. Their proposal is negotiated and some items on the menu change.

Descriptor 3: Creative thinking, where students create, design, imagine, and suppose

Children have wonderful imaginations and love to create, design, and invent. In school, however, they are often told to follow strict rules, adhere to criteria, and provide the one correct answer, not necessarily the most creative one. By teaching students to create, design, and imagine, teachers prepare students for the flexible and creative thinking they will need to exercise later in life.
Examples: Create and Design

- Design a food chain with imaginary animals. Provide a rationale for where each animal fits.
- Create a survey to determine the favorite food of students in your school.
- Design a new playground for the school and make sure your drawing is to scale.
- Rewrite the *Bill of Rights*.
- Create a classroom constitution.
- Create a three-dimensional map of your state.
- Suppose George Washington was never born. Write about what America might be like today without him.
- Create a song or develop new words for an existing melody.
- Create a football or basketball play during a physical education class.

Descriptor 4: Research-based thinking, where students explore and review a variety of ideas, models, and solutions to problems

In the midst of the information age, students need to know not only how to research to find information, but also how to review a variety of ideas and come to solutions that are well-supported and make sense.

Examples: Research-Based Thinking

- Research six different professions and describe the benefits and pitfalls of each.
- Research three sources of alternative energy and, based on your analysis of each, recommend the most fruitful source.
- Research the staple foods from countries in three different continents, and describe why those foods are so pervasive.

Example: Research-Based Thinking, Analytical Thinking, and Practical Thinking

During a study of the Jim Crow laws, students also conduct a study of Civil Rights laws. They then compare and contrast the two different groups of laws, identifying strengths and weaknesses. After comparing and contrasting the laws, they debate the need for present laws to ensure all citizens have equal rights and create the wording for these laws.
Descriptor 5: The teacher provides opportunities for students to generate ideas and alternatives

One element of sound thinking and creativity is the ability to generate many ideas and consider many alternatives and possibilities. This type of thinking is rarely employed in classrooms, but there are some simple ways to provide for students to generate lots of ideas and consider alternatives in nearly every subject.

Example: Generate Ideas

Before beginning a unit on deserts, a teacher asks students to independently list on a sheet of paper all the plants, animals, and attributes of the desert they can identify.

Example: Generate Alternatives

When solving a fraction problem, a math teacher asks students to generate different ways to solve the problem and different ways to represent their answers.

Example: Generate Ideas and Alternatives

A science teacher has students conduct experiments about which variables lead to maximum plant growth. One group tests different types of light, one tests different types of liquids, one tests different types of soil, and one combines what students hypothesize to be the best of each. In this example, students not only generate ideas about which variables to test, but also consider many alternative explanations.

Descriptor 6: The teacher provides opportunities where students analyze problems from multiple perspectives and viewpoints

This descriptor, much like descriptor 5, applies to many disciplines. As children get older, if they do not learn to consider other peoples’ points of view and are not provided with opportunities to look at problems from several perspectives, their thinking is severely restricted. Getting students to consider multiple perspectives provides them opportunities to learn how those different than themselves may view problems and solutions.

Examples: Multiple Perspectives and Viewpoints

- A social studies class studies the Civil War by reading letters from soldiers from the North and South.
- An art class studies predominant symbols in Western art and Eastern art and compares and contrasts the two art forms.
- A physical education and math class work together to conduct a survey on children’s favorite sports, then analyzes the data by grade level, gender, and race. They also discuss the factors affecting the data to further develop their understanding of the similarities and differences between grade levels, gender, and race.
Descriptor 7: The teacher provides opportunities for students to monitor their thinking to ensure they understand what they are learning and that they are aware of the learning strategies they are using

Research has shown that monitoring and thinking about one’s thinking leads to better academic performance, behavior, and on-task engagement. There are many ways in which teachers can be explicit about reminding children what learning strategy to use, when to use it, and how students can begin to use it on their own.

Example: Monitoring Thinking

When reading, a teacher stops at critical points in the passage and reminds students that good readers summarize what they have read. She models how to summarize by modeling her own thinking and later calls on students to engage in this behavior.

Over the course of the year, the teacher models her thinking out loud for students. As the teacher reads, she says, “I’ve read a lot here. I better stop to summarize so I can remember and use what I am learning.”

The teacher makes her thinking explicit in the same way when she clarifies words she does not understand. She reminds students as they read that good readers clarify words that they do not know or understand. As she reads, she stops and says to herself, “I don’t understand this word, let me look for context clues, let me ask a partner, let me go to the dictionary, or let me make a note of it and return to it later.”

Suggested Coaching Questions on Thinking

See “Suggested Coaching Questions on Problem Solving,” the next indicator.

Professional Development Learning

During modeling of a strategy, the leader should identify the types of thinking he/she taught when vetting the strategy. For example, a leader may be modeling the use of a Venn Diagram to increase student achievement in comparing and contrasting. During the modeling of the strategy, the leader should make reference to how the strategy teaches analytical thinking.
Developing multiple skills in problem solving enriches the learner’s ability to manage complex tasks and higher levels of learning. By providing opportunities for students to practice many different approaches to solving problems, the teacher empowers the student with an important life skill.

Exemplary Descriptors for Problem Solving
Over the course of multiple observations the teacher implements activities that teach and reinforce six or more of the following problem-solving types:

1. Abstraction
2. Categorization
3. Drawing Conclusions/Justifying Solutions
4. Predicting Outcomes
5. Observing and Experimenting
6. Improving Solutions
7. Identifying Relevant/Irrelevant Information
8. Generating Ideas
9. Creating and Designing

It is important to note that this indicator states over the course of multiple observations, not over the course of multiple evaluations. Therefore, the multiple observations would be the regular support provided by administrators and teacher leaders in the form of team teaching and observing. When the teacher is formally evaluated, the types of problem-solving activities observed in previous lessons would impact the score assigned to this indicator.

Descriptor 1: Abstraction
Abstraction is the process of leaving out of consideration one or more properties of a complex object so as to attend to others. For example, when the mind considers the form of a tree by itself or the color of the leaves as separate from their size or figure, the act is called abstraction.

Abstraction is also applied when students take the key components or ideas occurring across given examples and use that idea to solve a new problem.

Example: Abstraction

After reading Rumpelstiltskin, Hansel and Gretel, and Little Red Riding Hood, students will create a list of four qualities that define “faiytaleness.”

Descriptor 2: Categorization
Students analyze information, classify it, and sort it into meaningful categories.

Example 1: Categorization

Students develop categories in which to sort vocabulary words. The categories may be common meanings, spelling patterns, parts of speech, etc.
Example 2: Categorization

In math, students are studying polygons. They will first define the essential characteristics of a polygon, and then sort the following list into examples and non-examples of polygons. Essential characteristics are “closed, plane figure, straight sides, more than two sides, two-dimensional, and made of line segments.”

<table>
<thead>
<tr>
<th>Circle</th>
<th>Cone</th>
<th>Cube</th>
<th>Cylinder</th>
</tr>
</thead>
<tbody>
<tr>
<td>Heptagon</td>
<td>Hexagon</td>
<td>Parallelogram</td>
<td>Pentagon</td>
</tr>
<tr>
<td>Quadrilateral</td>
<td>Ray</td>
<td>Rectangle</td>
<td>Rhombus</td>
</tr>
<tr>
<td>Sphere</td>
<td>Square</td>
<td>Trapezoid</td>
<td></td>
</tr>
</tbody>
</table>

Descriptor 3: Drawing Conclusions/Justifying Solutions

Students draw conclusions based on data presented to them in many forms, viewpoints, perspectives, and quality.

De Bono (1994) states that there are three levels of conclusions at which the mind can arrive:

1. A specific answer, idea, or opinion;
2. A full harvesting of all that has been achieved, including, for example, a listing of ideas considered; and
3. An objective look at the “thinking” that has been used.

Example 1: Drawing Conclusions

Examples of each of the three levels are represented below.

After reading and discussing the events leading up to the Boston Tea Party, students will:

1. Write a paragraph expressing which one event had the greatest impact on causing this insurrection.
2. Debate, then decide which one event had the greatest impact on causing this insurrection, then prepare a written summary with careful notes of all major points.
3. After hearing debate and deciding which one event had the greatest impact on causing this insurrection, students will write a reflective paragraph as to the process they went through in making their final decision.

Example 2: Drawing Conclusions

Student teams shop for the best buy on candy at the local grocery store. Students gather prices, size/weight of packages, and desirability of the candy. Each team computes price per ounce/gram and where each falls on a 1-10 desirability scale. They then analyze their data and determine which candy is the best buy for their team and provide evidence for their choice. This activity also requires students to justify a solution.

Children analyze several possible solutions, select the best solution, and justify why that solution is best and why other solutions are less adequate.

**Example 1: Justifying Solutions**

After studying the Civil War, students will write editorial articles supporting the Confederate or Union stand.

**Example 2: Justifying Solutions**

Students will solve math problems and prove to a partner that their answers are correct. Here is one example:

“If you were to construct a 6 x 6 checkered square, how many total squares would there be?” (Hint: How many 1 x 1 squares, 2 x 2 squares, 3 x 3 squares are present?).

**Descriptor 4: Predicting Outcomes**

Students make predictions, and then test the validity of those predictions.

**Example: Predicting Outcomes**

Students are reading *A Rat’s Tale*, by Tor Seidler, about two young rats from different socioeconomic levels, whose true love must endure all kinds of adventures and challenges. When Montague decides to save the wharf, students predict and record in their reading journals some possible scenes that may unfold in the story and whether Montague will be successful.

**Descriptor 5: Observing and Experimenting**

Children observe, record, code, and measure. Children develop hypotheses, gather instruments, then collect and analyze data.

**Example: Observing and Experimenting**

After a study of yearly weather patterns, students will keep daily weather records for one month, noting the date, type of weather, temperature, and amount of precipitation. They will create their own rain gauges to measure the precipitation.
Example: Observing and Experimenting continued

At the end of the month they will determine the median and mean for temperature and precipitation. Using this data and their knowledge of yearly weather patterns, they will hypothesize whether the medians and means for the next month will be the same, higher, or lower. At the end of the second month, students will again analyze their data, compare to the previous month, and either confirm or refute their hypotheses.

Descriptor 6: Improving Solutions
Children are given a solution to a problem, and asked to suggest methods for improving it.

Example 1: Improving Solutions

Students have read a series of Nate the Great mysteries. There is a discussion of weak and strong endings. Pairs of students choose one to reread together that they feel has a weak ending. Together they rewrite the ending to give a better explanation that solves the mystery.

Example 2: Improving Solutions

Students studying World War II may choose a specific battle and develop ways it could have been more effectively planned by the losing side to change the outcome.

Descriptor 7: Identifying Relevant/Irrelevant Information
Students are given relevant and irrelevant information needed to solve a problem. They identify relevant information and use that information to solve a problem.

Example 1: Identifying Relevant or Irrelevant Information

Students reread the fairytale, Goldilocks. They are then asked to fill in a “T-chart” with evidence from the story that is relevant or irrelevant to whether or not Goldilocks is a criminal and should be arrested. Finally, they render their verdict.
Example 2: Identifying Relevant or Irrelevant Information

When solving word problems in math, students identify information that is necessary and unnecessary to use in developing their solution.

Descriptor 8: Generating Ideas
Children are given ill-defined problems and taught to look for analogies, to brainstorm, to generate idea lists, to create representations, and to come up with viable solutions.

Example: Generating Ideas

Students are in small groups and are presented with the following information after studying the geography of the Southwest U.S. and the water cycle in science:

“It is the year 2010. The Colorado River, which in the past has been a major source of water to Southern California, has dried up. How can we replace this critical source of water?”

Students will generate as many possible solutions as they can, order them from most effective to least, and provide reasoning for deciding which would be their first and last choices.

Descriptor 9: Creating and Designing
Children are asked to create or design a product, an experiment, or a problem for another student to solve or evaluate (e.g. video, cartoon strip, presentation, software application, etc.).

Example 1: Creating and Designing

Students read *The Legend of Jimmy Spoon* by Kristina Gregory. Since this book lacks a map, students will create one showing the locations Jimmy visits with his adopted Shoshone tribe. They can begin with a generic map, which includes Utah, Idaho, Montana, and Wyoming, to trace Jimmy’s travels throughout the book.

Example 2: Creating and Designing

Students create tutorials in PowerPoint to teach younger students basic information about the continents. Presentations must be at their partner’s reading level and include a mini quiz at the end.
Suggested Coaching Questions on Thinking and Problem Solving

- How do you plan for activities and/or assignments that teach students different types of thinking or problem solving?
- Ask teachers to reflect on the specific activities and/or assignments utilized within the lesson and then identify the type of thinking and/or problem solving each taught. This type of reflection will provide a means for assessing a teacher’s understanding of analytical, practical, and research-based thinking, and the types of problem solving referenced under this indicator.

Professional Development Learning

During modeling of a strategy, the leader should identify the types of problem solving he/she taught when vetting the strategy. For example, a leader may be modeling a strategy to support students in solving mathematical word problems. The new learning may be a chunk of the strategy in which students identify important information they will need to answer the question. The leader would then connect for the teachers how this chunk of the strategy is an example of identifying relevant/irrelevant information under this indicator.
Designing and Planning Instruction

This section includes resources and information on the three indicators under Designing and Planning Instruction:

1. Instructional Plans
2. Student Work
3. Assessment

Instructional Plans

Time spent developing strong lesson plans yields many benefits. Lesson plans contribute to better-managed classrooms and more effective and efficient learning experiences for students.

Instruction in a school using the NIET evaluation system is based heavily on state standards, as well as analysis of formative and summative student assessments. Therefore, it is important that teachers incorporate these into their daily planning.

Exemplary Descriptors for Instructional Plans

Instructional plans include:

1. Measurable and explicit goals aligned to state content standards;
2. Activities, materials, and assessments that:
   » Are aligned to state standards.
   » Are sequenced from basic to complex (teaching of sub-objectives follows a logical progression).
   » Build on prior student knowledge, are relevant to students’ lives, and integrate other disciplines. » Provide appropriate time for student work, student reflection, and lesson and unit closure.
3. Evidence that plan is appropriate for the age, knowledge, and interests of all learners; and
4. Evidence that the plan provides regular opportunities to accommodate individual student needs.

Evaluating Lesson Plans

It is suggested that administrators and teacher leaders select a system or protocol that provides feedback to teachers on individual lesson plans on a regular basis. This development would be an appropriate activity for a professional development meeting. Administrators and teacher leaders might bring examples of lesson plans to a meeting and analyze various aspects utilizing the rubric (e.g. checking the alignment of activities, materials, and assessments, or evaluating the learning objectives to ensure alignment to state standards). By focusing on specific descriptors of this indicator, administrators and teacher leaders can more narrowly focus their analysis of teachers’ lesson plans. Specific written feedback can then be provided to teachers.
Suggested Coaching Questions on Instructional Plans

- Why is aligning the objectives to the standards important?
- Which standards seem the most difficult for students to master? Why do you think students are having difficulty mastering those in particular?
- Which sub-objectives need to be taught for students to master a standard?
- Was there a connection between the students’ mastery of the learning objective and the lesson plan?
- How did you decide to choose the activities, materials, and assessments included in this lesson plan?
- How did you plan to accommodate students’ individual interests and needs?

Professional Development Learning

The leader of professional development needs to verbalize connections between the TAP Teaching Standards and instructional practice as he/she models new learning. The leader can do this by identifying the learning objective, student accommodations, and assessment tools from his/her own teaching experience with a strategy.

- Connect the new learning of a strategy to the indicator being targeted to support teachers in developing plans that are aligned to the rubric.

Professional Development Learning continued

- Define the learning objective for students as it relates to the strategy and indicator being targeted.
- Develop an assessment that provides teachers with evidence that students have developed proficiency in a specific skill or indicator. Define the criteria for proficiency.
- Like a quality lesson, it is also essential that during professional development meetings: all the activities align to the objective; the new learning builds on previous learning; the new learning directly supports the identified student need; and appropriate pacing exists.

Student Work

The development and evaluation of student work should enhance and reinforce instruction in the classroom. Student work and/or assignments should be developed so that they are aligned to pre-tests and post-tests, which should be aligned to the high-stakes test.
It is critical that teachers are able to use the analysis of student work as a predictor for how students will perform on post-tests. If students are not progressing properly or progressing more quickly than expected, the teacher’s long-range plan should be adjusted to reflect students’ changing needs. Teachers may also review examples of student work for the purpose of analyzing characteristics of sub-groups or for isolating reasons students are still not mastering a specific skill by comparing the work to specific and commonly agreed-upon criteria.

**Exemplary Descriptors for Student Work**

Assignments require students to:

1. Organize, interpret, analyze, synthesize, and evaluate information rather than reproduce it;
2. Draw conclusions, make generalizations, and produce arguments that are supported through extended writing; and
3. Connect what they are learning to experiences, observations, feelings, or situations significant in their daily lives, both inside and outside of school.

**Suggested Coaching Questions on Student Work**

- How closely was the student work aligned to the lesson objective and/or state standard?
- How were the criteria for scoring student work communicated to students?
- Why is it important to clearly communicate the criteria for the student work to students prior to their completion of the assignment?
- What types of thinking or problem-solving skills did the work require of the students?
- Using Bloom’s Taxonomy, at what level is the student work that was assigned? Is it at the appropriate level considering the students’ stage of learning?
- How are the criteria for student work aligned to the standards and high-stakes test? Why is it important that they are aligned?
- How engaged did students appear when they completed the assignment?
- How did the completed work demonstrate the evaluation criteria? Did most students’ work meet the teacher’s expectations? If not, what reasons might explain why?
- How are the guidelines for student work going to mesh with the next grade level’s guidelines and state standards?

**Professional Development Learning**

- When vetting a strategy, the leader of professional development develops the expectations for student work that teachers will use as evidence of student mastery.
- The leader of professional development should identify for teachers how the student work was developed and the level of Bloom’s Taxonomy at which students will be expected to work. Leaders might also make connections to the descriptors under *Thinking* and *Problem Solving*. Student work that requires higher levels of thinking and problem solving will provide evidence that teachers have met descriptors under *Student Work*.  

Assessment

Effective assessment is a fundamental part of instruction and learning. The goal of this section is to provide information and examples of assessment. An effective assessment plan answers the questions, “What do I want my students to be able to do as a result of my teaching?” and “How do I know the students learned what I taught?” When these questions are asked and answered regularly, the teacher can effectively plan, diagnose, and intervene on a continual basis to raise student achievement.

Exemplary Descriptors for Assessment Plans

Assessment plans:
1. Are aligned with state content standards;
2. Have clear measurement criteria;
3. Measure student performance in more than three ways (e.g., in the form of a project, experiment, presentation, essay, short answer, or multiple-choice test);
4. Require extended written tasks;
5. Are portfolio-based with clear illustrations of student progress towards state content standards; and
6. Include descriptions of how assessment results will be used to inform future instruction.

Suggested Coaching Questions on Assessment

- What criteria were used in developing or selecting the assessment(s)?
- What types of assessments were used to evaluate student learning?
- How did the assessment(s) used accommodate the needs and interests of individual students?
- How will the results of the assessment(s) be used to impact future instruction?

Professional Development Learning

- Model how to assess students’ mastery of the identified skill on which the professional development meeting is focused when teachers implement the strategy in their classrooms.

Leaders of professional development need to model how they analyzed the results of formative and summative assessments and how they used these results to plan instruction. This analysis should provide direction for the leader in identifying modifications teachers may need to make to the strategy based on the results from his/her vetting of the strategy. If a leader has not analyzed assessments from vetting the strategy, then he/she will not be able to provide a model for the teachers on how to analyze their students’ assessments, nor will leaders be able to clearly explain how they made modifications based upon students’ needs.
The Learning Environment

This section includes resources and information on the four indicators under *The Learning Environment*:

1. **Expectations**
2. **Managing Student Behavior**
3. **Environment**
4. **Respectful Culture**

### Expectations

**Exemplary Descriptors for Expectations**

1. Teacher sets high and demanding academic expectations for every student.
2. Teacher encourages students to learn from mistakes.
3. Teacher creates learning opportunities where all students can experience success.
4. Students take initiative and follow through with their own work.
5. Teacher optimizes instructional time, teaches more material, and demands better performance from every student.

The descriptors under this indicator directly connect to descriptors in the *Instruction* domain. For a teacher to include the descriptors under *Expectations*, he/she must have knowledge of the students he/she is teaching. Differentiated instruction methods that are demanding for every student and create opportunities for all students to experience success can only be implemented when a *teacher’s knowledge of students* is developed and utilized during instruction. When a teacher sets high and demanding expectations for every student, he/she is also able to develop and/or select *activities and materials* that are challenging. The second descriptor connects to *Motivating Students*. When a teacher regularly reinforces and rewards efforts, students will be encouraged to learn from their mistakes and take risks. A teacher must be able to create a safe learning environment in which students’ efforts are reinforced and valued in order for students to experience success. For a teacher to optimize instructional time, he/she must be able to implement lessons that include appropriate *lesson structure and pacing* for students who progress at different learning rates. For additional explanation of these indicators, refer to the pages in this handbook that address each of the indicators under *Instruction*.

### Managing Student Behavior

**Exemplary Descriptors for Managing Student Behavior**

1. Students are consistently well-behaved and on task.
2. Teacher and students establish clear rules for learning and behavior.
3. The teacher uses several techniques, such as social approval, contingent activities, and consequences, to maintain appropriate student behavior.
4. The teacher overlooks inconsequential behavior.
5. The teacher deals with students who have caused disruptions rather than the entire class.
6. The teacher attends to disruptions quickly and firmly.
Timely and effective management of student behavior is critical for effective instruction to take place within a classroom. Descriptors under Standards and Objectives and Presenting Instructional Content both address a teacher’s modeling of clear expectations for students. While these indicators focus on instruction, expectations must also be clearly modeled for student behavior for effective instruction to occur that increases student achievement. For a teacher to manage student behavior effectively, he/she must not only model the expectations but have knowledge of the students he/she is teaching. Teachers must be aware of and practice a variety of techniques to maintain appropriate behavior that are dependent upon having knowledge of individual student’s needs. Teachers must also know students’ interests in order to motivate them to change inappropriate behaviors. Therefore, this indicator is also connected to Motivating Students.

**Environment**

**Exemplary Descriptors for Environment**

The classroom:

1. Welcomes all members and guests.
2. Is organized and understandable to all students.
3. Supplies, equipment, and resources are easily and readily accessible.
4. Displays student work that frequently changes.
5. Is arranged to promote individual and group learning.

This indicator deals with the learning environment of the classroom, including the physical arrangement of the furniture and availability of supplies for students to utilize. When supplies, equipment, and resources are easily and readily accessible, then the descriptor, “routines for distributing materials are efficient,” under Lesson Structure and Pacing, can be met.

LEARN North Carolina has a great section on tips for creating a positive physical environment. The following checklist from the site can be used for self-evaluation of a classroom’s environment:

- Various areas of the classroom are created for use in a variety of activities.
- Desks or general seating is arranged so that the teachers can easily get to each student.
- The lighting in the room is adequate.
- The room temperature is generally moderate to cool. Warm classrooms lead students to be more lethargic, inattentive, and consequently bored and disruptive.
- The entrance to your room does not cause distractions to students during lessons.
There is a place in your classroom, away from the rest of the class, where you can have a private conversation or give a private reprimand to an individual student.

The blackboard is visible to all students during lessons and is clean and uncluttered.

Bulletin boards are attractive and not cluttered with “old work.”

The room has just the amount of furniture that is functional and does not contain useless or nonessential furnishings.

The seating arrangement is designed in an orderly way so that the organization of the seats helps the students to feel more organized.

Study carrels are used only in conjunction with other types of seating arrangements.

Students are seated far enough apart so that innocent moves by students don’t distract other students.

Seats are arranged in such a way as to reduce traffic distractions. For example, as students get up to go to the bathroom or pencil sharpener, they do not overly distract students they pass.

Make sure that students have assigned seats, and don’t allow them to constantly change their seats.

**Suggested Coaching Questions on Classroom Environment**

- Is the room welcoming? What evidence is there that indicates that it is?
- Is it conducive to student independence (e.g., can they get their own paper, is the pencil sharpener located in a logical place)?
- Is a variety of student work posted on the bulletin boards? Or just the best?
- Is the room arranged to promote individual and group work? Can the classroom accommodate different grouping patterns?
- Is the information students need posted so they can use it (e.g., the standards, the goals for the day, the schedule/agenda)?
- What are the biggest challenges to having your classroom set up as you would like?
- What might be some solutions?
- How do you plan and rotate the work on your bulletin boards so that all students have an opportunity to have their work displayed?

**Respectful Culture**

**Exemplary Descriptors for Respectful Culture**

1. Teacher-student interactions demonstrate caring and respect for one another.
2. Students exhibit caring and respect for one another.
3. Teacher seeks out and is receptive to the interests and opinions of all students.
4. Positive relationships and interdependence characterize the classroom.
Creating a positive classroom climate begins with showing respect to one another. Teachers most often set this in motion when they develop a set of collaborative ground rules for their classrooms and then model these for the students on a regular basis.

Teacher non-verbal cues that indicate respect and interest are:

- Tone of voice
- Smiles
- Eye contact
- Wait time
- Affirmative head nods
- Proximity to student

Suggested Coaching Questions on Respectful Culture

- Are the students empowered to make decisions?
- Are they interdependent?
- Do they have opportunities to collaborate?
- Are the students listening to each other?
- Do students feel safe sharing their feelings and thoughts with each other?
- Do students exhibit patience and respect with their peers?
- Do they handle supplies in a respectful and orderly manner?
